PROJECTS

Dental Clinic Web-Based Management System

Developed a dental clinic management system that includes patient records, appointment scheduling, and inventory tracking to streamline clinic operations. Implemented secure admin authentication and a centralized dashboard for efficient system control and monitoring. Designed a user-friendly interface to ensure smooth navigation and effective data management for clinic staff.

Blockchain-Based Student Registry System

A full-stack web application for secure, tamper-proof student record management using blockchain-backed storage. Built using React, Node.js, Hyperledger Fabric, JWT authentication, and bcrypt encryption, with RESTful APIs and both web and CLI interfaces. Delivered role-based access control, cryptographic data integrity checks, and a blockchain audit trail that logs every profile change ensuring transparency, traceability, and protection against unauthorized modifications.

IOT - Based Smart Vest for Occupational Safety Monitoring of Traffic Enforcers

Capstone Research Project — Jesus Reigns Christian College, 2026 | Published: International Journal of Research and Scientific Innovation (IJRSI)

Developed an IoT-based smart vest for traffic enforcers that monitors real-time vital signs and environmental conditions including heart rate, body temperature, air quality, humidity, GPS location, and fall detection. Built using an ESP32 microcontroller integrated with multiple sensors transmitting live data to Firebase, paired with a Flutter Android app featuring a real-time dashboard, alert history, guardian contact management, and automatic SOS alerts with GPS coordinates. Successfully demonstrated real-time emergency detection and instant alert delivery to registered guardians and emergency responders, improving occupational safety for traffic enforcement personnel.

OCR APP (Ongoing) — A Flutter-based OCR mobile app that scans IDs and passports to extract structured data (name, document number, dates, nationality). Built using Flutter, Supabase Edge Functions, and Google's Gemini API (gemini-2.5-flash) with schema-enforced outputs. Currently developing the document-scanning pipeline as an MVP, with a server-side architecture that protects API keys and stays within free-tier quota limits — collaborating with a co-founder via GitHub.

EXPERIENCE

Laravel Internship - Gleent Incorporated

3 Months (300 hours)

Quality Assurance, Ticket Assessment as well as Laravel Programming and acted as a Team Leader to my Co-Interns

IT Support - Magellan Solutions

2 Months (200 hours)

Computer Maintenance, Troubleshooting, System Administration, Ticketing.

EDUCATION

2023 - Graduating August

Bachelor of Science in Information Technology

SKILLS

- **Programming Languages & Tools:** Java, Python, C++, Dart, HTML, CSS, JavaScript, Laravel, Flutter, React, Node.js, Hyperledger Fabric, Firebase, Supabase, JWT Authentication, Arduino (Embedded C/C++), IoT Development (ESP32)
- **Database Management:** MySQL, Supabase, Firebase
- **Version Control:** Git, GitHub
- **Cybersecurity Tools (Kali Linux):** Wireshark, Nmap, John the Ripper, File decoding tools
- **Awards/Activities:** Participated in CyberSecurity UMAK 2025
